

# 3SKILLS INTERNSHIP – PROJECT 1 CLONE WEBSITE USING HTML & CSS

**Project Name :** MusicHub – Music Landing Page

**Student Name:** Rutuja Chandrashekhar Dhirde

**College:** S. B. Jain Institute of Technology, Management & Research, Nagpur

**Course:** B.Tech – Computer Science & Engineering (Data Science)

**Project:** Clone Website Using HTML & CSS

**Project Name:** MusicHub – Music Landing Page

**Technology Used:** HTML5, CSS3

## 1. Introduction :

MusicHub is a responsive music landing page developed as part of the 3Skills Internship Project 1. The website is designed using HTML5 and CSS3 to provide a clean, modern, and user-friendly interface for exploring music.

The website includes a navigation bar, hero section, featured music cards, call-to-action section, and footer. CSS styling, hover effects, gradients, animations, and responsive design have been used to improve the overall appearance and user experience.

## 2. Objectives :

The main objectives of the MusicHub website are:

- To create a responsive music landing page using HTML and CSS.
- To design a clean and attractive navigation bar and hero section.
- To display featured music in an organized card layout.
- To implement hover effects and simple CSS animations.
- To make the website responsive for desktop and mobile devices.
- To improve practical understanding of HTML structure and CSS styling.

### **3. Technologies Used :**

HTML5: Used to create the structure and content of the website.

CSS3: Used for styling, layout, colors, gradients, animations, hover effects, and responsive design.

Visual Studio Code: Used as the code editor for developing the website.

Google Chrome: Used for testing and checking the website on different screen sizes.

### **4. Features of the Website :**

The MusicHub website includes the following features:

- Responsive navigation bar with Home, Music, Artists, About, and Login options.
- Attractive hero section with a music-themed design.
- Featured Music section with three music cards.
- Interactive hover effects on buttons, cards, and navigation links.
- Animated music icon in the hero section.
- Call-to-action section for user engagement.
- Responsive layout for mobile and desktop screens.
- Clean and modern footer with useful links.

### **5. Project Implementation :**

The project was implemented using a simple HTML and CSS structure.

index.html: Contains the main structure of the MusicHub website, including the navigation bar, hero section, featured music cards, call-to-action section, and footer.

style.css: Contains all the styling rules for the website, including colors, fonts, spacing, layouts, gradients, hover effects, animations, and responsive design.

The website was tested in Google Chrome on both desktop and mobile screen sizes to ensure that the layout works properly across different devices.

## 6. Screenshots:

The following screenshots show the design and responsive layout of the MusicHub website.

**Figure 1:** Homepage – Desktop View

**Figure 2:** Featured Music Section

**Figure 3:** Mobile Responsive view

## 7. Conclusion :

The MusicHub project provided practical experience in developing a responsive website using HTML5 and CSS3. The project helped in understanding webpage structure, styling, responsive layouts, hover effects, animations, and user-friendly design.

The final website successfully provides a clean and attractive music-themed interface that works on both desktop and mobile screen sizes. This project also improved practical skills in frontend web development and website design.

## **8. Learning Outcomes :**

Through this project, I learned:

- How to structure a webpage using HTML5.
- How to style webpages using CSS3.
- How to create responsive layouts for different screen sizes.
- How to use CSS gradients, transitions, hover effects, and animations.
- How to organize website content into different sections.
- How to test and improve a website using browser developer tools.
- How to build and present a complete frontend web project.

## **9. Future Scope :**

The MusicHub website can be further improved by adding JavaScript functionality, music playback features, user login and registration, search functionality, playlists, artist profiles, and integration with a backend or music API.

These improvements can make the website more interactive and closer to a complete music streaming platform.
